Instructions:

- 1) Print and cut all parts, being careful not to cut any of the white tabs.
- 2) Fold the parts through the dotted lines and bend all the white tabs, then bend them back to a flat position (the purpose is to create creases, this is not necessary for the leading edge of the wings)
- 3) Apply a small amount of white glue to the tabs and glue them together.

Tips:

- 1) Build the wings and lower sections first, then add the fuselage to the wings. Add the nosecone, and then close the top flap of the fuselage last. Finally add the stabilizers and engines.
- 2) Use thick typewriter paper. Regular paper will yield a fragile model.
