

# Titan atmosphere

An Orbiter add-on for the atmospheric model of Titan

## Introduction

This add-on accurately reproduce the atmospheric model of Titan from an altitude of 1380 km to the ground, based on samples collected by the Huygens probe which entered Titan's atmosphere on 14-Jan-2005.

The dataset available here:

[http://atmos.nmsu.edu/data\\_and\\_services/atmospheres\\_data/Huygens/Huygens.html](http://atmos.nmsu.edu/data_and_services/atmospheres_data/Huygens/Huygens.html)

contains the engineering and scientific data derived from the measurements obtained by the HASI instrument during the entry phase and the descent phase.

## Installation

Unzip the archive to the Orbiter root folder maintaining the folder structure.

Add the line: `Module_Atm = TitanAtm` to the file `<Orbiter_root>\Config\Titan.cfg`.

The DLL "TitanAtm.dll" included in this add-on assigns the value to the following atmospheric constants: ground level temperature, pressure and density, gas constant, ratio of specific heats and atmosphere altitude limit. The values assigned by "TitanAtm.dll" can be overridden by the lines: `AtmAltLimit`, `AtmGasConstant` and `AtmGamma` written in "Titan.cfg" which takes precedence over the DLL, while the lines: `AtmPressure0` and `AtmDensity0` are ignored by Orbiter (when this add-on is used).

This add-on assigns `AtmAltLimit = 1380156`, `AtmGasConstant = 295.8391071` and `AtmGamma = 1.4`.

## Accuracy

The following data files were used to reproduce the pressure, temperature and density profiles:

[http://atmos.nmsu.edu/PDS/data/hphasi\\_0001/DATA/PROFILES/HASI\\_L4\\_ATMO\\_PROFILE\\_DESCEN.TAB](http://atmos.nmsu.edu/PDS/data/hphasi_0001/DATA/PROFILES/HASI_L4_ATMO_PROFILE_DESCEN.TAB)

[http://atmos.nmsu.edu/PDS/data/hphasi\\_0001/DATA/PROFILES/HASI\\_L4\\_ATMO\\_PROFILE\\_ENTRY.TAB](http://atmos.nmsu.edu/PDS/data/hphasi_0001/DATA/PROFILES/HASI_L4_ATMO_PROFILE_ENTRY.TAB)

[http://atmos.nmsu.edu/PDS/data/hphasi\\_0001/DATA/PPI/HASI\\_L4\\_PPI\\_PRESSURE\\_VEL.TAB](http://atmos.nmsu.edu/PDS/data/hphasi_0001/DATA/PPI/HASI_L4_PPI_PRESSURE_VEL.TAB)

[http://atmos.nmsu.edu/PDS/data/hphasi\\_0001/DATA/TEM/HASI\\_L4\\_TEM\\_TEMPERATURE.TAB](http://atmos.nmsu.edu/PDS/data/hphasi_0001/DATA/TEM/HASI_L4_TEM_TEMPERATURE.TAB)

Since those sampled points are interpolated with a natural cubic spline, there are no interpolation errors, in other words, the values of the pressure, temperature and density reported in the data files are exactly matched by this add-on.

The following graphs show the values for the atmospheric parameters obtained from this add-on:
