

# Uranus Moons for Orbiter 2016 – Expansion Pack

## ABOUT

This expansion pack includes a series of scenarios for the Uranian Moons for Orbiter 2016 addon (found [here](#)), along with the textures used for the included bases. My intention is to release these textures as part of a texture expansion pack for spaceports at a later stage, but the textures used in the Uranus Moons addon are included here. These textures are derived from [Well's](#) beautiful [Lunar base Aurora v1](#) addon.

## TO INSTALL

To install the expansion pack, simply extract the contents of the *expansion\_pack* folder into Orbiter's root directory.

## ADDING THE BASE TEXTURES

To make the base textures accessible to Orbiter, simply copy and paste the following into *Orbiter/Config/base.cfg* under the 'BEGIN\_TEXTURES' header:

```
basetex/pva01
basetex/wall01
basetex/wall02
basetex/wall03
basetex/wall04
basetex/wall05
basetex/roof01
basetex/roof02
basetex/roof03
basetex/roof04
basetex/roof05
basetex/roof06
basetex/tank01
```

## LICENSING

This expansion pack is distributed under the MIT license.

## OPTIONAL OLYMPUS BASE UPGRADE

If you like the design and textures of the bases in the Uranian Moons addon, you can give Mars's Olympus base a similar appearance by replacing *Orbiter/Config/Mars/Base/Olympus.cfg* with [this file](#).
